

AMENDMENT TO THE SPECIFICATION

Please replace the paragraph beginning at page 5, lines 7 to 18, with the following rewritten paragraph:

-- A driving member 20 has an engaging top section 21 and a skirt portion, teeth 22 defined in an inner periphery of the skirt portion. The skirt portion is mounted to the cylindrical top 11 and includes a second groove 23 defined in the inner periphery thereof so that a C-shaped clamp 40 is engaged with the first groove 114 and the second groove 23 so as to connect the driving member 20 to the base 10. The teeth 22 are engaged with the at least one of the two ratchet teeth 512 of the two pawls 51. The ring 30 is sandwiched between the flange 12 and a lower edge of the skirt portion of the driving member 20. The ring 30 has a slot ~~[[26]]~~36 defined longitudinally therethrough in which the protrusion¹²¹ of the base 10 is movably retained so as to limit the rotational movement of the base 10. The engaging top section 21 has a polygonal outer contour and a top hole is defined in a top of the engaging top section 21 so as to receive a bit or the like therein. --
